

# CLAIMS RETRIEVER

Powered by TPA Stream

## What is Claims Retriever?

This new feature connects members' medical, dental or vision carrier portals with their HealthEquity member portal to automatically display claims. With Claims Retriever, members who are not currently receiving claims through integration can now enjoy the convenience of having their claims displayed within their HealthEquity portal.

## How does Claims Retriever benefit my members?

Having claims automatically sent to members' HealthEquity portal allows them to:

- Trigger payments and/or reimbursements without having to manually enter claim information.
- Store claims for historical records.
- Substantiate card transactions to decrease the likelihood of having to provide a receipt or EOB for FSA or HRA account transactions.

## How does it work?

Claims Retriever makes it easy to collect and sweep claims information from various carrier portals to HealthEquity accounts by allowing your members to enter their login credentials to each of their carrier portals.

Once they have set up their connections, Claims Retriever will take care of the rest by gathering and delivering any of their claims directly to their HealthEquity account. It does all of the heavy lifting and presents claims so that your members can manage their healthcare expenses effectively.
